

## **If you are buying a house – Here are some questions to ask your realtor:**

### **What is the impervious surface limit for the property?**

- It is usually from 12% to 30% in Wake County. The number to call to find out is (919) 856-6335. Just give them the address and ask for the impervious limit for that address.

### **What are the setbacks from the property line for a detached garage? Are there any other restrictions? Height, how far from the street is a corner lot, how far from the buildings including the house? Any Easements?**

- If you call them, ask for the setbacks for a detached garage. This is how far from the property lines you must be. Most garages can't be taller than the house.

### **Can I have a plot plan of the property?**

- Sometimes the impervious limits are on the plot plan. If possible, get a plan or survey. It tells you a lot and is more accurate than the Wake County aerial.

### **HOA? You need to know what their restrictions are.**

- We don't do brick foundations, so they need to be OK with a monolithic slab foundation with same siding (vinyl, hardiplank, or cedar) and same shingles. Most HOA's are OK with this.

### **Where is the septic and well?**

- You can't be on the septic tank or leach lines and you can't drive over the septic lines. You must be at least 25 feet from a well.
